

Choose to Refuse

What happens after you've finished with your straw?

It gets put to landfill or incinerated.

Plastic doesn't biodegrade.

Some gets washed into rivers and waterways and ends up in the ocean.

It litters our streets and waterways.

Sea life mistake it for food. The plastic cannot be digested and makes the animal feel full.

So do you really need a straw?
Choose to refuse.

Just say,

No straw please!

#refuse4good

when you order.
