

# Choose to Refuse

What is wrong with plastic bottles?

The price of bottled water is up to 10,000x the cost of tap water

We use them for 15 mins but they last FOREVER!

More water is used in the making of the bottle than it actually contains

They don't get made into new bottles.

100ml of oil is used to make one 500ml bottle!

Instead they're down-cycled and are made into things of less worth than before like carpets and fleeces.

**#Refuse4Good**

visit [www.kidsagainstplastic.co.uk](http://www.kidsagainstplastic.co.uk)

They're littered and make their way into rivers and streams.

**Use a reusable bottle!**
